CHALLENGE

This multi-use new construction project is situated in the heart of downtown Dallas just off the Woodall Rogers Connector. With 20 stories of office space, another 30 stories of luxury residential space, and additional retail and common space, the project owner needed a competent and capable low voltage partner. From access controls on the building to parking control and revenue control systems in the parking garages, this project faced many low voltage challenges.

SOLUTION

FSG brought its team of structured cabling and security professionals to the project ready to answer the challenges set forth by the owner and the architect. FSG provided complete structured cabling services from design to install to punch list. FSG's Audio Visual team brought latest technologies to the project including displays, A/V controls, digital signage, and much more. FSG's security team brought access controls, video surveillance systems, parking control systems, and a parking guidance system. Additionally, FSG provided key-less locking hardware and access control systems for the 300 homes in the luxury residential tower.

RESULT

FSG touched and worked on every low voltage system on the project. By offering multiple disciplines, FSG is able to bring a convenience, consistency and quality to the project that is unmatched in the industry.
