ELECTRICAL CONSTRUCTION CASE STUDY

FSG Delivers Exacting Electrical Design for UBS Financial in Los Angeles

Challenge

As the largest Swiss banking institution in the world, UBS Group maintains a presence in all major financial centers around the globe. New Los Angeles branch location features unique high-end finishes that are associated with the company's design standards. General Contractor Swinerton turned to FSG's Los Angeles branch to execute the electrical construction work scope because of precise, top-quality construction practices were critical to supporting UBS's brand and fulfilling the expectations for this project.

Solution

FSG was working with the owner's New York-based project manager. The project required FSG to coordinate the receipt and installation of custom lighting fixtures, proprietary network components, and an extremely technical security infrastructure as part of the tightly specified electrical design. FSG's project manager kept the job on track even amid the emerging challenges of the COVID-19 pandemic, by incorporating new safety protocols into the normal workflow each day.

Result

Thanks to persistence, patience, and a commitment to delivering excellence on every aspect of the project work scope, the work was completed as specified and delivered on time to the customer's satisfaction.
