LIGHTING RETROFIT CASE STUDY

FSG Has a Long IDIQ Relationship with the USPS

Challenge

FSG has enjoyed a 30+ year relationship with the US Postal Service, working first for USPS Contract holders such as Parsons, JP&C, Liton, ConEdison Solutions, and others, as well as working for utility partners such as Public Service Electric and Gas, Baltimore Gas and Electric and others.

Solution

FSG has designed turnkey solutions for USPS facilities large and small. For large handling facilities FSG has been a trusted partner for many years, installing and updating lighting as systems change. For example, FSG converted the Morgan facility in NYC 3 separate times over a 20 year period, as technology changed and improved. FSG also introduced the USPS to Utility Direct Install programs in multiple states, upgrading hundreds of locations. Lastly, when the USPS made the early move to intelligent lighting controls, FSG installed and programmed Encelium systems in many large facilities.

Result

FSG's new IDIQ contract with PCA has been nationally advertised and legally procured per Federal Acquisition Regulations (FAR), giving USPS facilities another way to cost-effectively update their lighting systems, or update and maintain their existing systems and controls.
