Owner

Retail Banking & Pharmacy clients

Contract Type

Logistics as a Service

Contract Amount

9,000,000

General Contractor

GE Current

Electrical Contractor

Multiple Electrical Contractors

CHALLENGE

GE Current needed to complete new fixture installations and facility retrofits around the country. The project involved over 4,500 locations, multiple installation contractors, and a tight schedule. Bulk material would need to be received and stored to be prepared for staging by site. Multiple sites would need to be bundled for release to installation contractors based on a schedule. The project required SKU level visibility into all material at all times and complete tracking of material through final installation.

SOLUTION

FSG reconfigured space inside of our MDC's and created special racking systems and a "warehouse within the warehouses" dedicated to the project. We acquired additional warehouse space to accommodate the SKU list that grew from 35 items to over 995 during the project. We provided full visibility into project inventory at all times and integrated with the client's IT system to report on inbound material, stored material, and outbound shipments on a daily basis. Our project management team provided sourcing and procurement for all "one-off" material. The 4,500 sites required over 20,000 orders, 140,000 lines, and almost 2,000,000 SKU's of material to complete.
