

INDEED

Austin, Texas

Indeed needed this eight-month project completed in 4.5 months, using all high-end finishes.

CHALLENGE

Indeed needed this eight-month project completed in 4.5 months, using all high-end finishes. The client's vision included a length of wall to include a tunnel-like effect using 270-degree and 360-degree areas of video walls to encompass the visitors walking the lobby hall. Hundreds of LCD televisions needed to be lined up, flush with one another, and hiding all electrical circuits for clean and stunning visual effect. This and many other additional flairs required a large amount of amperage to be added throughout the project.

SOLUTION

To make this beautiful project come to life, FSG greatly increased our manpower and extensive FSG family to bring manpower from other FSG branches in Texas. We used value engineering methods, including pre-fabricated fixture assemblies to expedite installations. FSG integrated three different lighting control systems, an LCD television tunnel, LED up-lighting, and interior LED signage to pull off the visual magic needed to match Indeed's wonderful design. We approached this project with our true can-do attitude and it shows throughout the quality of work and ability to find solutions to difficult aspects of the project. We completed the project on schedule within the 4.5 months with a very satisfied client. FSG was awarded multiple additional contracts after completing this project so successfully.
